

Instructions to Run the “News Aggregator” Project with Docker

Step 1: Clone the Repository:

Open a terminal or command prompt and run the below command

command: `git clone https://github.com/NihalKm/news-aggregator.git`

Step 2: Navigate to the project folder

command: `“cd news-aggregator-app “`

Step 3: Ensure Docker is Running

Make sure Docker Desktop is open and running before proceeding.

Step 4: Build the Docker Image

From the terminal, run the below command to build the Docker image

command: `“docker build -t news-aggregator .”`

(Replace news-aggregator with any name you desire for the Docker image)

Wait for the build process to complete successfully

Step 5: Run the Docker Container

Run the following command to start a container from the image

command: `“docker run -p 3000:3000 news-aggregator”`

(Replace news-aggregator with the name you used while building the Docker image.)

Step 6: Access the Application

Open a browser and navigate to below URL to access the “News Aggregator Project”.

URL: `http://localhost:3000/`
